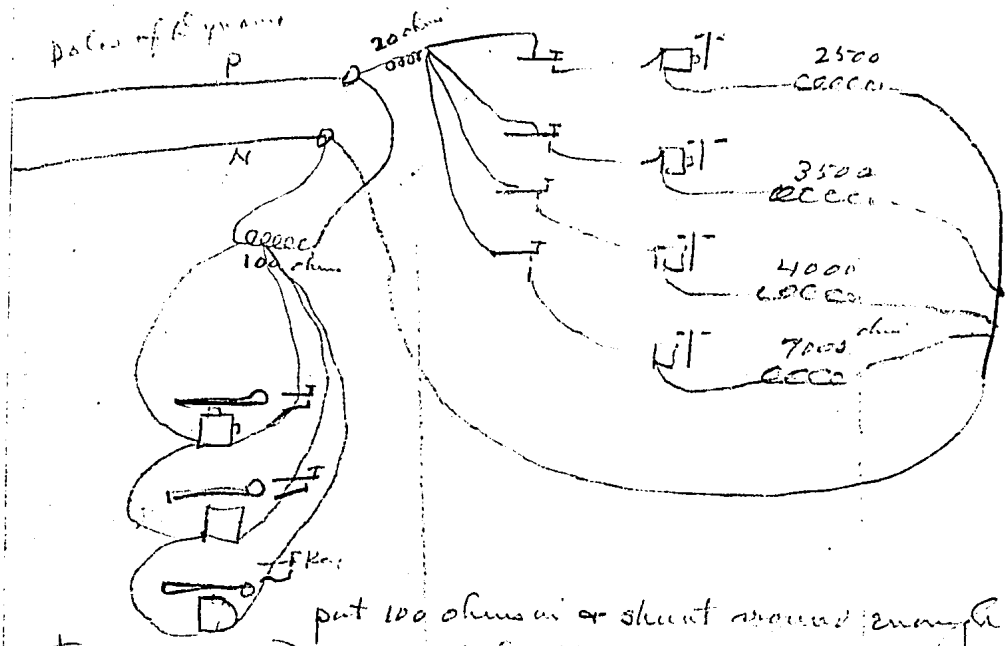
John: Please try the following experiment.

I want to work Local Sounders and also work Telegraph wires of ~~4000~~ 2500 to 7000 ohms Resistance, so arrange it that I can have Local Sounders, ~~Line~~ Line Sounders in multiple with Each other.



put 100 ohms in or shunt around enough resistance to give good Current to the Sounder then use of the Sounders in multiple with Each other

This is arranged so as to send out positive or negative Currents. The Lines on top of 75 ohm Coil will get Current in one direction while those on bottom of 75 ohm coil will get Current in opposite direction.

Arrange accidental circuits so you can change Relays & Keys Etc from one Experimental to the other quickly. Then Let me know when you are ready to show it to me.
